INTRODUCTION

From Yreka in the north, where rural poets gather at a workshop to improve their craft, to El Centro in the south, where grade school children come together to celebrate the birthday of a favorite author, local public libraries play a critical role in the lives and learning of all Californians.

Libraries promote the free flow of information – one of the pillars of freedom in American society. Libraries devote their skilled staff and financial resources to disseminating ideas and information, encouraging a life-long pursuit of knowledge and discovery, and inspiring people of all ages, cultures, and economic circumstances to broaden their understanding of our world. Local libraries confer profound and wide-ranging benefits on our modern society by:

- Connecting residents to information and people around the globe by supplying access to books, magazines, newspapers, the internet and database resources;
- Preserving and expanding our culture by collecting and providing access to CDs and DVDs highlighting our music, literature, and movies;
- Informing and enriching people’s lives by tutoring students and teaching English to adults;
- Creating intellectual and artistic communities and promoting the sharing of ideas among members of diverse communities by forming book clubs to explore and discuss literature;
- Entertaining our children and encouraging their love of reading with story times, wildlife and science demonstrations, and other fun and educational programs; and
- Sharing services and knowledge with our most remote communities and immobile populations by creating cooperative resource sharing systems, public-private partnerships, satellite branches, and bookmobiles.

How is it that libraries succeed in enriching our society in these and so many other ways?

Each of our diverse local libraries shares a common reliance on a limited number of state laws and constitutional provisions that outline their governance, funding, services, and service area. Identifying and understanding these laws is important not only for local officials and library staff, but residents and patrons too. A library’s legal authority, combined with its historical and political circumstances, shapes who controls the library and makes decisions about its activities, which revenues will support library services and facilities and how library funds will be spent, as well as how and where each library will provide services.

In 1994, the California State Library published the original California Public Library Organization. Written by Linda Wood, the Alameda County Librarian, the report provided an overview of the different types of libraries, described their commonalities and statistical characteristics, and identified relevant policy issues. This document updates and modernizes the 1994 report. Specifically, this publication identifies the different types of local public libraries and compares their characteristics, operations, service area, services, and revenues. An organizational matrix highlights the essential legal authority, formation, governing board, local financing, and service area of each library type. Statistics, charts, graphs, and examples highlight the variation in results that these factors produce.

As libraries evolve to meet the public’s modern needs and preferences, this document will help citizens and policymakers gain a better understanding of how local libraries organize, operate, and provide services in California’s diverse communities. It may also help educate and inspire Californians to participate in and improve their own local public libraries.

All data in the report is from FY 05/06, from 2007 California Library Statistics http://www.library.ca.gov/html/LibraryStats.cfm. Copies of this publication are available on the California State Library website at www.library.ca.gov, or by contacting the California State Library at 916-654-0261.

CALIFORNIA PUBLIC LIBRARY ORGANIZATION was supported in whole or in part by the U.S. Institute of Museum and Library Services under the provisions of the Library Services and Technology Act, administered in California by the State Librarian. The opinions expressed herein do not necessarily reflect the position or policy of the U.S. Institute of Museum and Library Services or the California State Library, and no official endorsement by the U.S. Institute of Museum and Library Services or the California State Library should be inferred.
CALIFORNIA’S PUBLIC LIBRARIES: ORGANIZATION, FUNDING & SERVICE AREA

A handful of state statutes and constitutional provisions dictate local public libraries’ formation procedures, governance structures, local financing, and service area. This matrix classifies library agencies into one of four categories, based on their legal authority and administrative structure: county libraries, city libraries, independent special district libraries, and joint powers of authority (JPA) libraries. The chart also summarizes the provisions associated with each library type and notes additional variations that may occur within each category. For a list of the statutory code sections and constitutional citations for each type of library agency, see Appendix A, page 18.

Legal Authority

County Libraries

County libraries are organized under the County Free Library Law. In addition, the County Service Area (CSA) Law allows for the creation of a separate legal entity for library services, or a mechanism to provide financing flexibility within an existing county library system.

City Libraries

City libraries are organized under the Municipal Library Law or, for charter cities, under the constitutional “municipal affairs doctrine,” and pursuant to a charter adopted by the city’s voters.

Independent Special District Libraries

Independent special district libraries may be organized under the following laws:
- The Library District Law
- The Library and Museum District Law;
- The Union and Unified High School District Library District Law; and
- The Community Services District (CSD) Law.

Joint Powers of Authority (JPA) Libraries

Joint Powers of Authority (JPA) libraries are organized according to an agreement between the governing boards of two or more governmental entities, pursuant to the Joint Exercise of Powers Act.

Formation

County Libraries

Under the County Free Library Law, county supervisors must publish notice of their intent to establish a county free library system and must vote on the proposal at a public meeting.

To form a CSA, voters, landowners, or local officials must initiate the formation and the county Local Agency Formation Commission (LAFCO) must approve the proposal. In some cases, an election is required.

City Libraries

Under the Municipal Library Law, the city council can create a city library system by adopting an ordinance. If 25% of the city’s voters petition to create a city library, council members must establish a library system.

Libraries in charter cities may also be formed according to the provisions contained within the city’s charter.

A city cannot withdraw from a county library system to form its own municipal library before giving notice to the county board of supervisors (before January 1), negotiating a division of property tax revenues, and publishing two newspaper notices of its intent to withdraw.

Formation of a city library requires a city council vote at a public meeting.
Independent Special District Libraries
Although each law is unique, forming a new independent special district usually requires the following four steps:
• initiation by voters, landowners, or local officials;
• Local Agency Formation Commission (LAFCO) review and approval;
• a public protest hearing; and
• an election.

Joint Powers of Authority (JPA) Libraries
JPAs are formed when the governing boards of two or more governmental entities agree to jointly manage a library system. A JPA contract may be limited to certain organizational or operational aspects of a library system while also maintaining some separate functions within the participating entities, or it may form a new entity to handle all aspects of library organization and operation.

Governing Board

County Libraries
County supervisors govern libraries established under the County Free Library Law or as a CSA.

City Libraries
Libraries formed under the Municipal Library Law are managed by a five-member board of trustees appointed by the mayor or city manager, with the city council’s consent. The city council may appoint its own members as the library trustees and then create an advisory board to help govern the library system.
Libraries formed according to a city charter are governed according to the provisions of the charter.

Independent Special District Libraries
Under the Library District Law, libraries are governed by a three- or five-member board of trustees which is directly elected by the district’s voters.

Under the Library and Museum District Law, libraries are governed by a five-member board of trustees elected by the district’s voters.

Under the Union and Unified High School District Library District Law, libraries are governed by the high school district’s trustees.

Under the CSD Law, libraries are governed by a five-member board of directors elected by CSD voters.

Joint Powers of Authority (JPA) Libraries
The JPA contract specifies the structure and terms of the governing board.
For example, the Sonoma County Library JPA designates a seven-member library commission with five members appointed by the county Board of Supervisors, one member appointed by the Santa Rosa City Council, and one member appointed by the Petaluma City Council.

Advisory Board
In addition to the governing board that runs the library, many libraries also have a citizen advisory board that provides advice and assistance for library governance and operations.
Local Financing for Operations

County Libraries

County library systems are divided into two separate categories for purposes of local operational funds: general fund libraries, and libraries with a dedicated property tax rate. This distinction is very important because it profoundly affects the amount and predictability of funds received by county library agencies.

County General Fund Libraries. The 22 county general fund libraries rely primarily on allocations from the county General Fund. Because of this, County General Fund libraries compete with other local service priorities, such as sheriff services, roads, and fire protection, for funding. To give libraries more certainty or increased revenues, county supervisors or voters may earmark a percentage of the county General Fund, or a portion of a particular local revenue source, for county libraries.

County Dedicated Property Tax Libraries. Twenty-four counties imposed a separate property tax for libraries before Proposition 13 (1978). This property tax rate still generates revenues, all of which are dedicated to county library services. Because a substantial portion of their revenues are guaranteed and cannot be spent on other county activities, county dedicated property tax libraries enjoy a greater degree of financial independence and certainty.

Voter-Approved Taxes. In addition to county libraries’ reliance on the general fund or a dedicated property tax stream, their budgets can be increased by voter-approved special taxes for library services. All special taxes imposed specifically for library services, including sales, hotel, utility use, and parcel taxes (flat rate property taxes), require 2/3 voter approval. If a county’s voters want to generate additional income for the county General Fund (for the support of any county function, and which may or may not be spent on libraries), the voters can impose the tax with a simple majority vote.

County libraries can also generate revenues by providing library services to other jurisdictions.

County Service Area (CSA) Funding. Though CSAs can be created as legally separate library providers, in practice, they are used to divide an existing county library system into different funding zones. Using a CSA, the county board of supervisors can propose a parcel tax within some or all of the library zones. After the election requiring a 2/3 vote, new and enhanced library services can then be targeted specifically to the zones that approved the taxes.

CSAs used for library funding rely primarily on special (parcel) taxes imposed within parts or all of their service area, but county supervisors can also allocate the local (non-property tax) revenues generated within the district’s boundaries to the CSA.

City Libraries

Municipal libraries rely primarily on allocations from the city General Fund, competing with other local service priorities, such as police services, roads, and parks for funding.

City council members can fund library services from any source of revenue in the city General Fund. To provide greater resources or revenue certainty for libraries, city council members and voters can earmark a portion of the city’s general revenues, or a portion of a specific revenue source, to support the city library. In charter cities, this earmarking can be placed into the city charter.

Council members may also ask voters to impose or increase taxes to provide additional revenues for the city library. If council members want to impose or increase a tax specifically for library services, including a parcel tax, 2/3 of the city voters must concur. If city voters want to generate additional income for the city general fund (for the support of any city activity, including libraries), the voters can impose the tax with a simple majority vote.

City libraries can also generate revenues by providing library services to other jurisdictions.
Independent Special District Libraries

Independent library districts usually receive a share of local property tax revenues based on historic allocations.

Library district governing boards may enhance local library funding by asking their voters to approve a special (parcel) tax for library service. Parcel taxes require 2/3 voter approval.

CSDs, like library CSAs in counties, are usually formed in areas with existing library services, as a way to divide library service areas into different funding zones in order to better target services to the communities that want additional or enhanced services and are willing to pay for them. Alternately, CSDs can be used as a mechanism to raise money to provide facilities or purchase services from other library entities. District libraries can also generate revenues by providing library services to other jurisdictions.

Joint Powers of Authority (JPA) Libraries

JPA libraries may be funded by any revenues streams available to its member agencies. Funding for JPA libraries is specified in the JPA agreement.

For example, the San Mateo County Library JPA is funded through a dedicated property tax rate imposed by the County in 1915, and also from state revenues, fines, fees, County contributions, gifts and grants, interest, and other sources that its member agencies allocate to the JPA.

Library JPA governing boards, if authorized in the enabling agreement, may enhance local library funding by asking voters to approve a special (parcel) tax for library service. Parcel taxes require 2/3 voter approval.

Library Generated Revenues

Most libraries of all types charge fines and fees for materials that are lost or returned late. Some libraries also engage in more entrepreneurial activity such as renting out meeting rooms and reception halls and selling library merchandise, like coffee mugs and book bags. Many libraries also seek and receive donations from Friends of the Library groups, library foundations, citizens, patrons, and businesses.

Capital Funding

County Libraries

To finance capital facilities, such as a new library building, a bookmobile, or large equipment purchase, county supervisors may ask the voters to approve a general obligation bond. General obligation bonds are secured by property taxes and require 2/3 voter approval.

In areas with significant growth, developer impact fees can also be approved by the governing board to finance the cost of the portion of the library that is attributable to the growth population.

Counties can also use other capital funding mechanisms such as revenue bonds, or direct allocations from other one time or ongoing revenue sources.

Counties can also use CSAs to divide the county into separate zones for general obligation bond proposals.

City Libraries

To fund capital facilities, council members can ask the city’s voters to approve a general obligation bond. General obligation bonds require 2/3 voter approval.

In areas with significant growth, developer impact fees can also be approved by the governing board to finance the cost of the portion of the library that is attributable to the growth population.

Cities can also use other capital funding mechanisms such as revenue bonds, or direct allocations from other one time or ongoing revenue sources.
Independent Special District Libraries
Library district governing boards can propose a general obligation bond for funding library capital facilities. General obligation bonds require 2/3 voter approval.

Library CSDs can also create several different zones for general obligation bond proposals.

Joint Powers of Authority (JPA) Libraries
Depending on the specific authority provided in the Joint Exercise of Powers Agreement for each JPA, JPA governing boards can propose a general obligation bond for funding library capital facilities. General obligation bonds require 2/3 voter approval.

Service Area

County Libraries
County libraries serve unincorporated areas and cities, or areas within cities, which are neither served by a city library nor within the boundaries of independent library districts.

Cities and library districts can ask to become part of the county library system. A county library may also contract with cities or other counties to provide services. County libraries that contract to provide services to city residents are sometimes called city-county libraries.

Although in practice CSAs are used as a financing tool, they can provide separate library services and facilities throughout the boundaries set by the LAFCO during the CSA’s formation. CSA boundaries can include all of the county’s unincorporated area or just one or more small communities. Cities can pass a resolution asking to be included within a CSA’s boundaries.

City Libraries
City libraries serve within the city’s boundaries but can contract with neighboring cities or the county to provide services. City libraries that contract to provide services to county residents are sometimes called city-county libraries.

Independent Special District Libraries
Independent special district libraries provide service within the boundaries set by LAFCO at the time of their formation.

Library districts created under the Library and Museum District Law serve in unincorporated areas. This law also allows districts to contract with cities, counties, and other districts to provide services.

Library districts formed under the Library District Law and the Union or Unified High School District Library District Law may serve incorporated and unincorporated service areas (and need not be coterminous with the school district’s boundaries). The districts may contract with neighboring city, county, and district libraries to provide services.

CSD libraries can serve in incorporated and unincorporated areas. CSD libraries may contract with other public agencies to provide services.

Joint Powers of Authority (JPA) Libraries
The JPA agreement designates the library service area. For example, the Santa Cruz City-County Library JPA specifies a service area that includes the County’s unincorporated area and the cities of Capitola, Santa Cruz, and Scotts Valley, but not the City of Watsonville.
Examples

County Libraries
Libraries governed by the County Free Library Law include Alpine and Imperial Counties (general fund libraries), and dedicated property tax libraries in Fresno, and San Bernardino Counties.
In addition to their county free libraries, library CSAs exist in El Dorado and Solano counties and others to provide additional funding flexibility.

City Libraries
Municipal libraries include the Berkeley Public Library (Alameda County), the Los Angeles Public Library (Los Angeles County), and the Woodland Public Library (Yolo County).
The San Francisco Public Library is organized and operated under the City’s charter, which reflects a consolidated city-county form of governance.

Independent Special District Libraries
Libraries formed as independent special districts include:
• The Palo Verde Valley Library District (Riverside County).
• The Buena Park Library District (Orange County).
• The Altadena Library District (Los Angeles County).
In addition, library CSDs exist in Glenn and Siskiyou counties to provide facilities or funding for library services provided by other library systems.

Joint Powers of Authority (JPA) Libraries
In addition to those JPA libraries previously mentioned, the Sacramento Public Library, the Santa Clara County Library and the Belvedere-Tiburon Library are JPA libraries.
LIBRARIES IN OUR COMMUNITIES: POPULATIONS SERVED, LOCAL FINANCING, AND EXPENDITURES, BY LIBRARY TYPE

California’s 181 local public libraries serve over 37 million people. Libraries are organized in one of four different categories: county libraries, city libraries, independent special district libraries, and Joint Powers of Authority (JPA) libraries. A library’s organization, coupled with its historical, political, and community influences, determines the library’s service area, funding, and spending levels.

The following pages highlight the number and types of California local public libraries and examine the specific service areas, funding levels, and expenditure patterns associated with each library type. The accompanying charts and graphs allow readers to compare and contrast the characteristics and challenges that typify the different library types.

I. How Many Libraries and What Type?

Given the limited number of statutory and constitutional options provided for local library organization, it is surprisingly difficult to quantify and classify the number and types of local libraries. The California State Library recognizes 181 distinct local public libraries agencies. Other local library agencies that exist are either obsolete, exercise a ministerial role in approving a contract with another library agency, or serve as a financing mechanism.

This document organizes local public library agencies into different categories depending on the library’s underlying statutory or constitutional authority and the governing board that administers its operations. Using the state’s list of local libraries, and applying this framework, there are: 117 city libraries, 46 county libraries (22 county general fund libraries, 24 county dedicated tax libraries), 12 independent special district libraries, and 6 JPA libraries. A complete list of local public libraries by type is found in Appendix B on pages 18 and 19.

For the most part, public libraries fall clearly within a single category, such as a municipal library formed to serve city residents, such as those in Berkeley and Long Beach, or a county library created to provide service to residents in unincorporated areas, as in Alpine and Trinity Counties. In some cases, however, a library’s organization and operation is more complicated. For example, the Stockton-San Joaquin County Library provides library services to the City of Stockton and the County of San Joaquin with the City of Stockton as the operating entity and the County of San Joaquin contracting with the city for library services. Other organizational permutations are found throughout the state.

II. Libraries and Their Communities

Each library’s permissible service area is defined under the statutory authority used to create that type of library system. However, all library formation laws contain flexibility which allows libraries, once formed, to contract or combine with other agencies, including private entities, for the provision of library services. For a list of state laws and constitutional provisions authorizing the formation of library agencies, see Appendix A on page 18.
In reality, library service areas are based on the library’s authorizing law, historical and political influences, and citizen preferences. For example, the Santa Barbara Public Library is organized under the city’s charter, but provides services by contract with surrounding communities. Alternately, in Glenn County, the Board of Supervisors pays other government entities to provide library services to local residents, rather than operating a county library system. For a list of libraries by type, see Appendix B on pages 18 and 19.

City and county library systems serve more than 90% of California residents, with each type of library serving about 45%. JPA and special district libraries provide services to a much smaller segment of the population: 7.27% and 1.36%, respectively.

Examining the median number of people served by each library type shows JPA libraries, which are regional by nature, have the biggest service populations (about 412,000 people per JPA library system). County dedicated tax libraries, with their relatively large boundaries, serve a median of 279,000 people. City libraries, with relatively smaller boundaries, serve about 69,000 people, on median. And special district libraries, with their very small service areas, provide service to a median of only 37,000 people.

III. Focus on Local Funding

California libraries rely on a variety of federal, state, and local sources, as well as private contributions. Federal funds come primarily in the form of grants to individual libraries that meet specified criteria. At the state level, the Public Library Fund (PLF) provides per capita allocations to public libraries and the California Library Services Act (CLSA) provides partial reimbursements for direct and interlibrary loans. Locally, libraries receive revenues very differently depending on their type. City and county general fund libraries follow one pattern, while special district and county dedicated property tax revenue libraries tend to exhibit a different trend. JPA libraries generally include a blend of both funding patterns. Because there are two distinct financial patterns associated with the state’s 46 county libraries, the following discussion of revenues and expenditures examines county general fund libraries and county dedicated property tax libraries separately.

Allocations from Local Governments. City libraries and the 22 county general fund libraries depend primarily on allocations from local governments: the city council, in the case of cities, and the county board of supervisors, for county general fund library systems. Library allocations come from the city or county general fund. In most cases, this means that libraries must compete each year with other local services to obtain funds. In cities, libraries compete against overall public safety, parks, streets, and other programs.
In counties, the competition for resources is even greater; in addition to local county needs, federal and state
government mandates require counties to spend significant percentages of their budget on national or state
programs.

To give libraries some budget certainty, some city and county governing boards, or voters, have voted to set
aside a portion of local revenues, such as a percentage of the general fund or a portion of their property tax
revenues, exclusively for library purposes.

JPA libraries, made up of city and county members, also rely on city and county allocations for funding. A
JPA contract may call for participating cities and counties to pay a certain amount annually, or it may require
the city council or county board of supervisors to commit a certain revenue stream to the JPA library. As an
example, for the Sacramento Public Library Authority, funding comes from an annual allocation from the
City of Sacramento general fund, a City of Sacramento voter approved special tax for enhanced services in
the City of Sacramento and a dedicated share of the property tax in the County of Sacramento for library
services in the unincorporated area and other incorporated cities outside the City of Sacramento.

**Dedicated Property Tax Revenues.** Alternately, special districts and the 24 dedicated property tax
libraries rely on the revenues generated from property taxes imposed prior to Proposition 13 (1978). These
historical property tax revenues are restricted for library uses only. With this guaranteed revenue source,
special district and county dedicated property tax libraries enjoy somewhat more predictable funding,
regardless of other local needs and priorities. However, some of these libraries also receive some general
fund revenues that can be affected by local economic conditions. In addition, these libraries have seen
significant effects in their local property tax revenue allocations due to ERAF.

**Voter-Approved Taxes.** In addition to local government allocations and historical property tax rates,
local libraries of all types also rely on voter-approved tax increases to expand library budgets. Revenue
from local library tax measures constitutes a significant portion, and in some cases a majority, of local
library funding.

Before the mid-1990s, some library funding measures required a simple majority vote or no vote at all. But
in the mid 1990s, a series of court cases and Proposition 218 (1996) tightened the requirement for local tax
proposals, requiring library revenue measures to achieve 2/3 voter approval and prohibiting the use of library
property assessments that do not require voter approval.

Libraries are not only dependent on local voters' willingness to impose library taxes, but they are also
dependent on the taxing authority and local tax base available to libraries of that type.

Cities and counties have the broadest taxing powers, with the ability to impose taxes on businesses, utilities,
hotels, sales, property, and other sources to fund library services. This broad taxing authority can benefit city
and county libraries that receive allocations from the city or county governments. And because cities and
counties create and fund JPA libraries, these libraries also benefit from these broad taxing powers.

Complementing their broad tax powers is cities' expansive tax base. Cities also tend to have the most
concentrated economic activity within their boundaries, and therefore, a more productive and diverse tax
base. This tax base enables cities, and the JPAs in which they participate, to broaden and diversify their tax
structure to produce the best mix and amount of revenues. Some urbanized counties also enjoy this robust
tax base, whereas rural counties do not.

Conversely, library special districts have narrow taxing power and a limited tax base. Specials district rely
almost exclusively on parcel taxes (flat rate property taxes) to support library operations. And since special
districts tend to have smaller boundaries than other library agencies, there are relatively fewer parcels to tax.
Statewide, local library revenue per capita is $26.47.

JPA libraries enjoy the highest per capita local revenues of all the library types at $54.79 per capita. Several reasons may account for this. All JPAs have city participants and can therefore take advantage of the municipal taxing power and broader tax bases. Four of the six JPAs include the membership of county dedicated property tax libraries, which brings a guaranteed revenue source. The combination of multiple funding sources, large population base and some historically well funded libraries helps create the significant local funding base.

City libraries have the second highest per capita local income at $34.64 per capita. City libraries’ relatively high level of funding reflects their expansive tax powers and broad tax base. Support for libraries may also be stronger in cities because voters may view libraries as a core function of city government.

Special district libraries’ per capita local revenues fall in the middle range of public libraries at $21.96 per capita. District libraries benefit from a relatively small population (slightly more than 1% of the state) and few competing service demands, but are limited by their narrow taxing authority and base.

County libraries’ per capita revenues are the lowest overall, with a substantial difference based on their financial status. County dedicated property tax libraries receive significantly more funds on a per capita basis ($20.60 per capita) than county general fund libraries ($17.54 per capita) that must face competing demands for the county’s resources.

IV. Capital Costs

Libraries need to collect and house their materials. To provide, upgrade, and equip those facilities, they turn primarily to bond revenues.

At the State level, libraries have taken advantage of two state bond measures providing matching funds for public library construction and renovation. The State Library Bond Act Board provides 65% of a local project’s costs, and the local jurisdiction provides the remaining 35% of the costs from their own funds. Proposition 85, a $75 million bond approved by the voters in 1988, funded 24 libraries. Proposition 14, the California Reading and Literacy Improvement and Public Library Construction and Renovation Bond Act of 2000, authorized the sale of $350 million of state bonds for public libraries and 45 library projects were funded.

Locally, library jurisdictions of all types enjoy the authority to issue general obligations bonds for capital expenditures. General obligation bonds, secured by ad valorem (value-based) property taxes, require 2/3 voter approval. Library jurisdictions use general obligation bonds to finance the acquisition and improvement of real property and to furnish and equip facilities.

In addition, in areas with significant growth, developer impact fees can also be approved by the governing board of a library to finance the cost of the portion of the library that is attributable to the growth population.

Cities and counties can also use other capital funding mechanisms such as revenue bonds, or direct allocations from other one time or ongoing revenue sources.
V. Examining Expenditures

Each library type has daily, operational expenses including employee salaries, materials, supplies, utilities, and other items. These expenditures are reflected in the number of service hours a library provides, the amount of materials available, and access to professional staff that shapes the community’s library experience.

Libraries’ per capita operational expenditure levels mirror the pattern established by per capita income with JPA and city libraries reaching the highest levels, special district and county dedicated property tax libraries spending the middle range, and county general fund libraries with the lowest per capita expenditures. This pattern is not surprising, for the more money a library can generate, the more it can spend in support of its activities.

Library spending levels have a direct impact on the types and amounts of resources and services they provide, and the resulting use. JPA and city libraries have the largest collections per capita, as well as number of open hours and staff. The resulting use levels reflect the resource levels, with city and JPA libraries again having the highest circulation and reference use per capita. However, city libraries show a much higher percentage of the population holding library cards than any other type of library. However, under California’s universal borrowing system, library users are not necessarily residents of the library jurisdiction from which they hold a library card so the higher percentage of library card holders in city libraries may be a result of the higher funding and associated resources of city libraries, attracting users from surrounding, less well funded library jurisdictions.
In addition to libraries’ operating expenses, they also have capital costs, including expenses associated with land, buildings, remodeling, vehicles, and equipment that costs more than $5,000. Libraries finance their capital costs with a mix of state bond funds, allocations from local governments (for city, JPA, and county general fund libraries), and bonds approved by the voters. Local capital expenditures for libraries are difficult to quantify and compare since they are not accounted for or reported uniformly across the state. In city, county, and JPA libraries, capital spending is sometimes accounted for in the larger city or county budget, making comparisons between library capital spending more challenging and less useful.
